

OUTSOURCED PV ENGINEERING · DACH & BENELUX

Your PV Designs. 48 Hours. Grid-Compliant.

The outsourced engineering partner for solar installers winning more projects than their team can handle.

**48-Hour Delivery**

Complete design files within 2 business days of receiving specs.

**Submission-Ready Files**

Formatted for direct Netzbetreiber submission. No re-work by your team.

**Redesign Guarantee**

If it fails grid operator review, we redesign it. Zero cost.

THE GUARANTEE

If it fails grid review — we redesign it. Free.

If the design doesn't pass your grid operator's technical review on the first submission, we redesign it at zero additional cost. No questions asked.

We stand behind the work. If it doesn't work, neither do we — until it does.

THREE BONUSES

We Handle the Objections Before You Raise Them

01

Revision-Free Handoff

Objection: "Outsourced work always needs corrections."

Every design ships with a full checklist: component sizing, string logic, shading analysis, and DACH/BENELUX compliance notes. Your installer picks it up and runs.

02

No Minimum Commitment

Objection: "We don't want to be locked in before we know the quality."

Your first project is a test. Pay per design. No retainer, no monthly fee, no volume obligation. If the first design doesn't impress you, you owe us nothing else.

03

Compliant with DE / AT / CH / BENELUX Standards

Objection: "Can a Kosovo firm deliver compliant designs for our market?"

Designs are produced to DIN VDE / EN requirements and reviewed against your network operator's grid code. Currently delivering across DE residential and small commercial.

CAPACITY · Q2 2025

We cap new partnerships at 3 per quarter.

Not a sales tactic — an operational decision. Deep client workflows require real capacity. We protect turnaround times by limiting intake.

Start in Q2 → onboarded now. Wait → Q3 queue.

WHO THIS IS FOR

**Solar installers & electrical contractors in
DE / AT / CH / BE / NL**

Winning more projects than their engineering capacity can handle.

**You don't need to hire — you need a design partner faster
and cheaper than a full-time engineer.**

Transparent Pricing. No Surprises.

One service. Full deliverable every time. Price determined by system size.

EVERY PROJECT INCLUDES

The Full Deliverable. Every Time.

- ✓ System sizing & panel count
- ✓ Panel type & inverter specification
- ✓ Roof / area layout plan
- ✓ String configuration & wiring logic
- ✓ Annual yield simulation (kWh)
- ✓ ROI & payback period analysis
- ✓ Bill of Quantities (BOQ)
- ✓ DIN VDE / EN compliance checklist

Every deliverable is formatted for direct submission to your grid operator. No re-work required.

PRICING BY SYSTEM SIZE

Know Your Cost Before You Send the Specs.

TIER	SYSTEM SIZE	PRICE	SCOPE
Residential	Up to 30 kWp	€ 220	Rooftop residential. Freelance rate in DE: €400–800 for same scope.
Small Commercial MOST COMMON	30 – 100 kWp	€ 450	Commercial rooftop. Single or three-phase.
Medium C&I	100 – 300 kWp	€ 900	Industrial rooftop or small ground-mount.
Large / Utility	300 kWp+	On Request	Large ground-mount. Scoped per complexity.

All prices exclude VAT. Invoiced in EUR. Payment due within 14 days of delivery.

FOR HIGH-VOLUME PARTNERS

Monthly Retainer — Lock In. Scale Up.

Commit to volume and get: lower per-project rate, named contact, dedicated capacity, guaranteed SLA.

€ 1,800 / month

Up to 10 projects

€180/project · Named contact · No queue

€ 3,500 / month

Up to 25 projects

€140/project · 24h urgent SLA · Priority slot

Retainer slots are limited. Available only after at least one completed per-project engagement.

TRACK RECORD

Every design submitted has passed grid operator review on first submission · DE residential & C&I.

Redacted sample deliverable at voltuka.com/sample · References on request.

VOLTUKA

Send us: roof plan, system size, location & grid operator. We handle the rest. Design delivered within 48 hours.
